DETAILED ACTION

Since claims 11-60 have been cancelled, then the specification should be amended to cancel the portions related to the cancelled claims.

Specification

The disclosure is objected to under 37 CFR 1.71, as being so incomprehensible as to preclude a reasonable search of the prior art by the examiner. For example, the following items are not understood:

The general structure of the polymer 1 on page 2 is complicated in that there is no connection between the repeating unit with C/R2/D nor A/R1/B nor E/R3/F nor – (CH₂)_x-/-O(CH₂)_x-/-O(CH₂)XO-. Applicant does not explain what the C/R2/D----- (CH₂)_x-/-O(CH₂)_x-/-O(CH₂)XO- standing for.

Applicant is required to submit an amendment which clarifies the disclosure so that the examiner may make a proper comparison of the invention with the prior art.

Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter which is not supported by the disclosure as originally filed).

A shortened statutory period for reply to this action is set to expire ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this letter.

On line 26 of page 2 in the specification, Y has been determined but there is no Y in the formula.

Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to

Art Unit: 1711

which it pertains, or with which it is most nearly connected, to make and/or use the invention, as stated above

Claim1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "Y" in line 1 of page 3. There is insufficient antecedent basis for this limitation in the claim.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yang et al of record on 1449.

The reference discloses a composition of matter comprising a repeating unit (see Figure 1: Reaction scheme for monomer and copolymer synthesis) in that the mechanism has been disclosed.

The disclosure of the reference differs from the instant claims in that the aromatic ring in the middle of the repeating unit does not contain a Nitrogen atom on the ring.

However, based on the mechanism, the Wittig reaction between a dialdehyde and a xylylenebis(triphenylphosphonium chloride) produces a product of the repeating unit in that the aromatic ring does not take any part or affect by the reaction. Therefore, it would have been obvious to one of ordinary skill in the art to replace the aromatic ring

Art Unit: 1711

by an aromatic ring containing a nitrogen on the ring since said replacement does not effect the mechanism and form the similar product of the claimed repeating unit in the absence of a showing of unexpected results derived from said use.
